(Mention code **FREEMONTH**)*

# You've seen the signs.

You've driven past the "PrePass-Equipped Weigh Station Ahead" signs on the highway. But you often find yourself waiting at the weigh station. Perhaps you've wondered if there is a reliable way to remain in compliance with safety regulations while staying on-schedule and saving fuel.

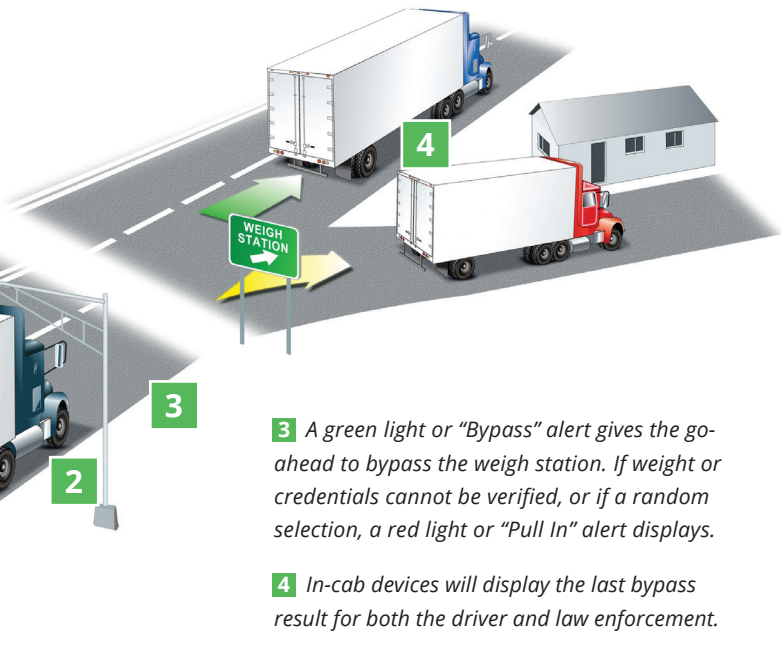

PrePass works through a small in-cab transponder or the PrePass mobile bypass application. Transponders offer 99.9% reliability and access to toll payment services and third party bypass networks. The PrePass app provides additional sites and increased functionality including ALERTS. When paired together, you get the most complete and reliable service available.

### ***How does my truck become “qualified” to use PrePass?***

When a carrier enrolls in PrePass, its safety and compliance data is verified and recorded according to state and federal regulations. Drivers must still ensure their vehicles operate safely and follow size and weight regulations for each state. There is a monthly fee to participate in this service, but the PrePass transponder is provided free of charge for each truck.

## How It Works

- 1 As your truck approaches the weigh station, it is electronically identified and at some weigh stations, weighed at highway speeds.
- 2 A PrePass computer located in the weigh station verifies your truck and/or fleet credentials.

***Is data about my driving kept private?***

In a word, yes. PrePass is provided by PrePass Safety Alliance, a non-profit public/private partnership. The Alliance is committed to following data privacy laws and protecting your personal privacy.

PrePass Safety Alliance gathers safety data and credentials from more than 100 different government sources. This data is maintained in a secure system to ensure carriers can continue to bypass. Event data collected at PrePass sites is maintained by 90 days and then purged, so there is plenty of time to ask about why your truck might have received a pull-in, or any other problems that might have occurred. In rare cases – such as an emergency or a criminal investigation – data can be obtained by law enforcement, but it's primarily used for one purpose: to ensure your truck can safely pass a weigh station.

### ***What about tolls?***

To pay tolls quickly using just one transponder, PrePass carriers have the option to enroll in PrePass Plus. It combines weigh station bypassing and electronic toll payment services under one account with consolidated invoices. Available at hundreds of locations nationwide, it's a great way to avoid the hassle of toll plaza stops.
