

INFORM™ Safety Software

Improve weigh station bypass rates, fleet safety and operational efficiency with the power of INFORM™ Safety. Included with your weigh station bypass service, INFORM™ Safety offers actionable data through a dashboard that enables you to understand the make-up of your fleet's Inspection Selection System (ISS) score, bypass savings and events, inspections and reporting. This empowers fleets to understand what actions are needed to improve safety and efficiency.

Your ISS score from the Federal Motor Carrier Safety Administration (FMCSA) helps determine your ability to bypass. PrePass maintains the most robust fleet safety database in the industry, including CVIEW/SAFER carrier records and information from more than 100 data sources.

INFORM™ Safety provides visibility into truck inspections, violations and safety score changes that can help fleets to identify trends that could cause ISS scores to fluctuate and then take action to improve.

Visualize Fleet Safety Data

INFORM™ Safety aggregates bypass data into a reporting and visualization tool to provide visibility into:

- **Inspections** – Where your trucks are being inspected and receiving violations by city, state and highway
- **Violations** – Why trucks are failing inspections and violation trends within your fleet
- **Identification** – Insight into problem areas related to VIN numbers, sites or equipment

Improve Safety and Efficiency

Improve your bottom line using your fleet's real world safety data

- + Save time and avoid delays at toll booths nationwide
- + Enhance maintenance processes to improve safety scores
- + Share inspection results and bypass activity over time to identify training or maintenance needs
- + Easily track active and unassigned transponders to get the most from your bypass investment
